4081

*The Golight Model 4021 LED work-light is a compact, modern, and powerful LED work-light featuring 16 LEDs. The work-light has been designed and developed for professional heavy duty use; a rock solid aluminum housing, a hardened and impact-proof polycarbonate front lens as well as a substantial stainless steel bracket makes it a highly robust unit. Its innovative design allows the exchange of front lenses in service from close range illumination to long range illumination. For service technicians this significantly reduces "down time" and repair costs while providing total flexibility in the workplace.*
